SUMMARY

Results-driven **Cybersecurity & Cloud Analyst** with hands-on experience in **SOC operations, Infrastructure Hardening, and Incident Response**. Proven track record of designing secure hybrid-cloud environments and mitigating network threats for SMB clients. Proficient in **SIEM (Splunk/Sentinel), Python scripting, and Vulnerability Assessment**. Leveraging a strong engineering background (B. Tech, 8.78 CGPA) to transition into a full-time Security Operations or Cloud Engineering role.

SKILLS

- **Security Operations (SOC):** SIEM Management (Splunk, Qradar, Azure Sentinel), Incident Response, Threat Hunting, Log Analysis, MITRE ATT&CK Framework.
- **Cloud & Infrastructure:** AWS (IAM, EC2, S3), Microsoft Azure (Active Directory, Sentinel), Linux Administration (Kali, Ubuntu), Windows Server Hardening.
- **Network Security:** IDS/IPS Configuration, Firewall Management, VPN/Tunneling, TCP/IP Analysis, Wireshark, Nmap.
- **Tools & Scripting:** Python (Automation/Security Tools), Burp Suite, Metasploit, Autopsy, FTK Imager.
- **Compliance:** NIST Cybersecurity Framework, OWASP Top 10.

EXPERIENCE

Independent Security & Cloud Consultant

Mar 2023 - Present

- **Infrastructure Hardening:** Designed and deployed a Zero-Trust network architecture for event venues, securing connectivity for **500+ concurrent users** while isolating critical payment systems.
- **Secure Cloud Deployment:** Engineered a private, self-hosted cloud storage solution (Nextcloud) for remote teams, implementing **SSL/TLS encryption**, role-based access control (RBAC), and 2FA, reducing data reliance on unverified public clouds.
- **Endpoint Security:** Orchestrated Group Policy Objects (GPOs) to enforce "Least Privilege" across **multiple workstations**, disabling unauthorized USB access to mitigate insider threats and malware injection.

Information Security Administrator Intern

Virtually Testing Foundation

Sep 2022 - Nov 2022

- **SIEM Log Analysis:** Collaborated with the SOC team to ingest and correlate logs using **Splunk and Qradar**, successfully identifying and triaging **50+ potential security alerts** weekly.
- **Vulnerability Assessment:** Conducted comprehensive security audits of lab environments, identifying critical misconfigurations and generating remediation reports aligned with industry standards.
- **Threat Intelligence:** Utilized threat feeds to track emerging APTs (Advanced Persistent Threats), updating internal detection rules to block malicious IPs and domains.

Cybersecurity Intern

Gurugram Police Cyber Cell

Jun 2021 - Jul 2021

- **Digital Forensics:** Assisted law enforcement in live digital investigations using **Autopsy and FTK Imager**, recovering deleted artifacts and analyzing user activity logs to support criminal proceedings.
- **OSINT Investigations:** Performed Open-Source Intelligence (OSINT) gathering to profile threat actors, contributing to actionable intelligence reports.

PROJECTS

Network IDS using Machine Learning

- Designed and implemented a Network IDS leveraging machine learning algorithms to identify and classify network intrusions.
- Implemented feature engineering techniques to extract relevant information for model training, enhancing accuracy and efficiency by 93%.
- Utilized a combination of supervised learning techniques to identify known attack patterns and detect anomalies in the network traffic.

Azure Sentinel SIEM & Live Attack Map

- Deployed a live Honeypot on Azure to attract global attackers, using KQL (Kusto Query Language) to plot real-time attacker geolocation data on a World Map dashboard.
- Configured detection rules for common attack patterns mapped to the MITRE ATT&CK framework.
- Set up automated alerts and generated security incident reports with actionable recommendations.

Group Policy Enforcement on Endpoints

- Created and deployed Group Policy Objects (GPOs) to disable USB mass storage access across 30+ LAN-connected PCs for an event.
- Enforced least privilege policies, restricted software execution using App Locker, and maintained local logs for audit.
- Developed a custom script to automate policy push, and validated policy enforcement and simulated user bypass attempts.

CERTIFICATIONS

- ISC2 Certified in Cybersecurity (CC)
- Certified App Sec Practitioner (CAP) Certificate
- Google Cybersecurity Professional Certificate
- CompTIA Security+ (In Progress)

ACHIEVEMENTS

- Participated in Hactoria Monthly OSINT CTF (**Secured Rank 2 in the CTF**)
- Participated in Smart India Hackathon 2022
