

VISHAL BEHL

Delhi, Delhi | +919015589658 | vishalbehl01@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Cybersecurity professional with hands-on experience in incident response, threat detection, and vulnerability assessment. Proficient in SIEM management and threat intelligence platforms with a strong foundation in triaging, correlating, and analyzing threat data. Demonstrated ability to translate raw intelligence into actionable insights and support security operations through effective risk communication and incident response.

SKILLS

- **System Administration:** Windows and Linux Administration, Azure and AWS Cloud Management
 - **Programming & Scripting:** C/C++ Language, Python Scripting
 - **Networking:** Network Configuration and Troubleshooting, Network Security
 - **Security Operations:** SOC Management Skills, SIEM Management, Threat Intelligence, VAPT
 - **Identity & Access:** IAM Management
 - **Cybersecurity & Threat Analysis:** Cybersecurity, MITRE ATT&CK, Vulnerability Intelligence, Threat Hunting, Incident Response, Research Skills
-

EXPERIENCE

Self Employed

Mar 2023 - Present

IT Support Consultant

Delhi, India

- Monitored and maintained network infrastructure for event venues, ensuring uninterrupted connectivity while adhering to best practices in network security.
- Designed and deployed a self-hosted NAS (Network Attached Storage) solution using Nextcloud, enabling secure, role-based access to cloud storage for remote users with SSL encryption, folder-level permissions, and email-based registration — improving data availability and reducing dependency on third-party cloud services.
- Resolved hardware and software incidents promptly to minimize downtime, contributing to the effective response to potential security events.

Virtually Testing Foundation

Sep 2022 - Nov 2022

Information Security Administrator Intern

Remote

- Partnered with the security team to monitor, detect, and triage security incidents, employing SIEM tools such as Splunk and Qradar to correlate alerts with internal telemetry.
- Conducted comprehensive security assessments of offline and online labs, identifying vulnerabilities and generating detailed reports that supported threat intelligence and risk assessment efforts.
- Utilized SIEM management tools effectively to enhance the review of threat data and streamline the incident response process.

Gurugram Police Cyber Cell

Jun 2021 - Jul 2021

Cybersecurity Intern

Gurugram

- Assisted in digital forensic investigations by analyzing system artifacts and user activity with tools such as Autopsy and FTK Imager, contributing to the recovery of actionable threat intelligence.
 - Engaged in continuous learning through workshops and training sessions to bolster understanding of threat actors, attacker methodologies, and cybersecurity frameworks.
 - Participated in CTF competitions to apply threat intelligence concepts and cybersecurity techniques in practical, problem-solving scenarios.
-

EDUCATION

Guru Gobind Singh Indraprastha University

Aug 2019 - Jul 2023

Bachelor of Technology, Computer Science and Engineering

PROJECTS

Network IDS using Machine Learning

- Designed and implemented a Network IDS leveraging machine learning algorithms to identify and classify network intrusions.
- Implemented feature engineering techniques to extract relevant information for model training, enhancing accuracy and efficiency by 93%.
- Utilized a combination of supervised learning techniques to identify known attack patterns and detect anomalies in the network traffic.

Secure Private Cloud Deployment

- Deployed a self-hosted cloud server on Windows using duckdns, enabling secure file access for remote users.
- Implemented folder-level access control using Group Folders and ACLs to ensure strict user isolation.
- Configured email-based user registration with whitelisting and SMTP integration for verification and alerts.
- Enabled remote access via dynamic DNS, port forwarding, and HTTPS for secure cross-platform sync.

SIEM - Based Threat Detection & Log Monitoring

- Designed and implemented a log ingestion pipeline using Microsoft Sentinel to collect security logs from multiple virtual machines.
- Configured detection rules for common attack patterns mapped to the MITRE ATT&CK framework.
- Set up automated alerts and generated security incident reports with actionable recommendations.

Group Policy Enforcement on Endpoints

- Created and deployed Group Policy Objects (GPOs) to disable USB mass storage access across 30+ LAN-connected PCs for an event.
- Enforced least privilege policies, restricted software execution using App Locker, and maintained local logs for audit.
- Developed a custom script to automate policy push, and validated policy enforcement and simulated user bypass attempts.

Multi Honeypot Platform

- Deployed T-Pot on Azure Cloud to enhance security measures.
- Configured virtual machine and network to support the installation and operation of T-Pot.
- Monitored and analyzed honeypot data to detect and respond to potential cyber threats.

CERTIFICATIONS

- ISC2 Certified in Cybersecurity (CC)
- Certified App Sec Practitioner (CAP) Certificate
- Google Cybersecurity Professional Certificate
- CompTIA Security+ (In Progress)
